Problem statement: Due to the information gap about house prices and the difference in house prices from one neighborhood to another, the individual may face a problem estimating house prices and may be subject to deception by real estate owners. Therefore, we will build a model that predicts house prices

Heatmap graph shows relationship between x variables and y variable. It is clear from the graph that the relationships between x variables are independent, and it dependent with y variable . (**median income**)

is the most variable affecting price
