

PREDICT THE PRICE OF THE HOUSE

TALAL ALARABI

Intordication

-Problem statement:

Due to the information gap about house prices and the difference in house prices from one neighborhood to another, the individual may face a problem estimating house prices and may be subject to deception by real estate owners. Therefore, we will build a model that predicts house prices.

-Project goal:

The main goal of this project is to study the Estates market and to train a model to predict the prices of the estates of and testing it using linear regression models .

Training: 65%

Testing: 64%

Conclusion

We have made a model capable of predicting house prices at a high accuracy, We will develop the model with more features by increasing the number of rows to be an excellent model
